

To launch our GUI for testing use,

```
py app.py
```

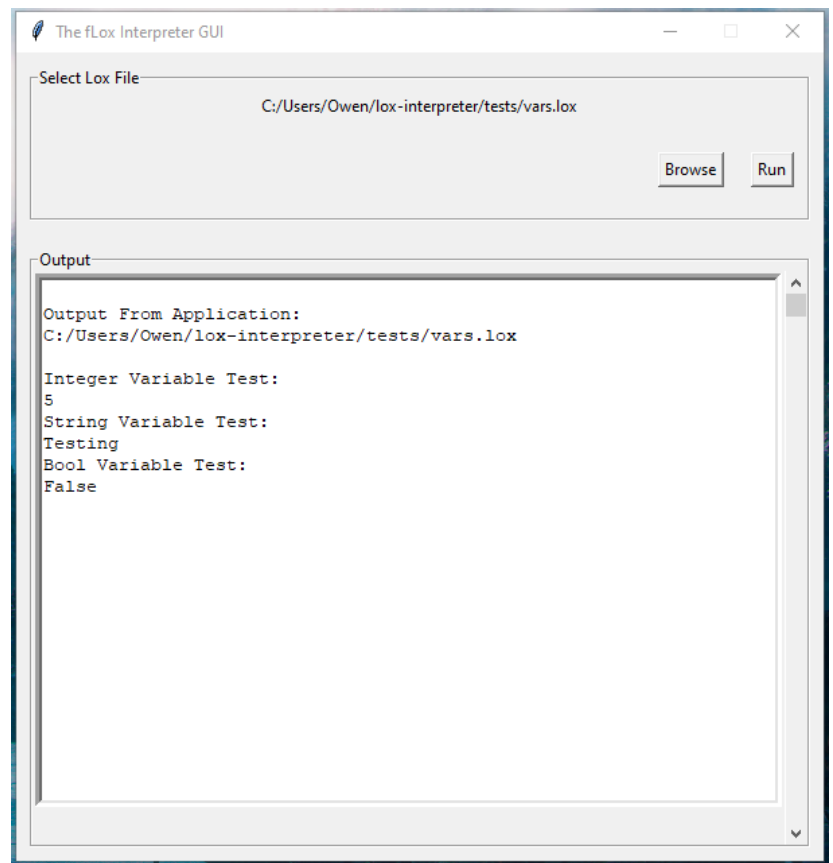

[More info about how to run our code in README.md]

Variable Definition Testing:

Lox Code:

```
tests > vars.lox
1  var testVariable = 5;
2  print "Integer Variable Test:";
3  print testVariable;
4
5  var testVariableString = "Testing";
6  print "String Variable Test:";
7  print testVariableString;
8
9  var testVariableBool = false;
10 print "Bool Variable Test:";
11 print testVariableBool;
```

Output:

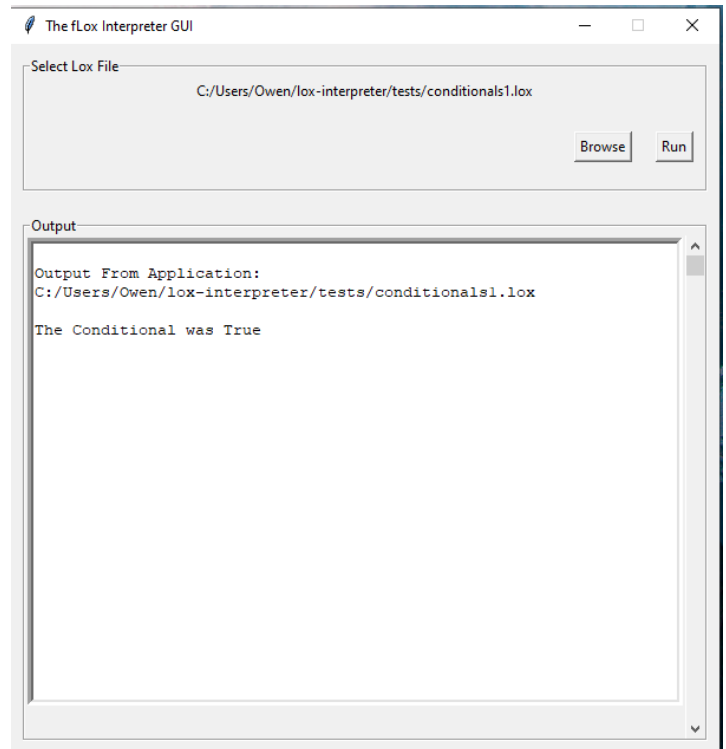

Conditional Testing:

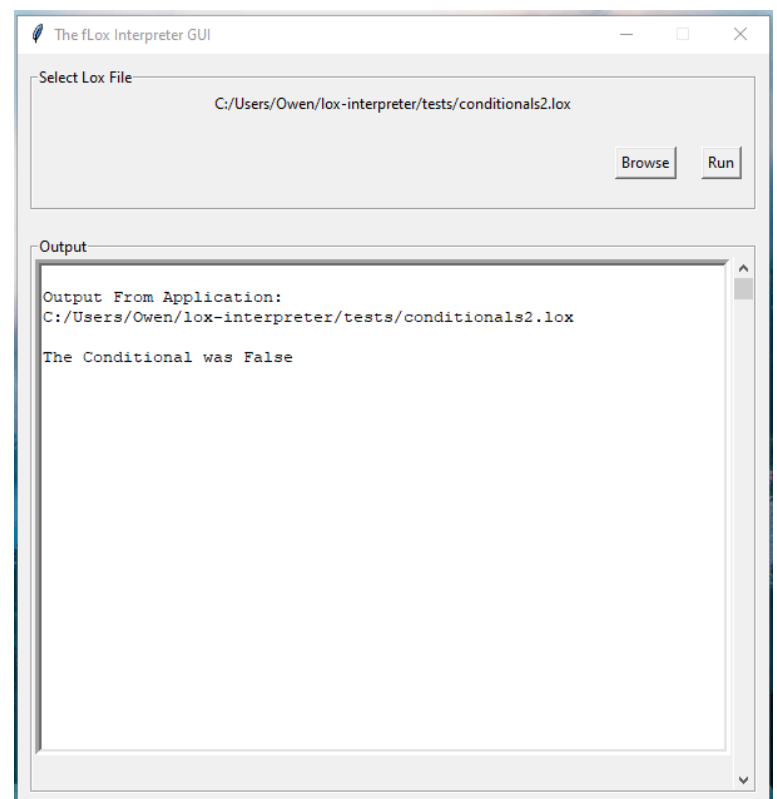

Code:

```
tests > conditionals1.lox
1  var cond = true;
2  if(cond){
3      print "The Conditional was True";
4  }else{
5      print "The Conditional was False";
6  }
7
```

Output:

```
tests > conditionals2.lox
1  var cond = false;
2  if(cond){
3      print "The Conditional was True";
4  }else{
5      print "The Conditional was False";
6  }
7
```

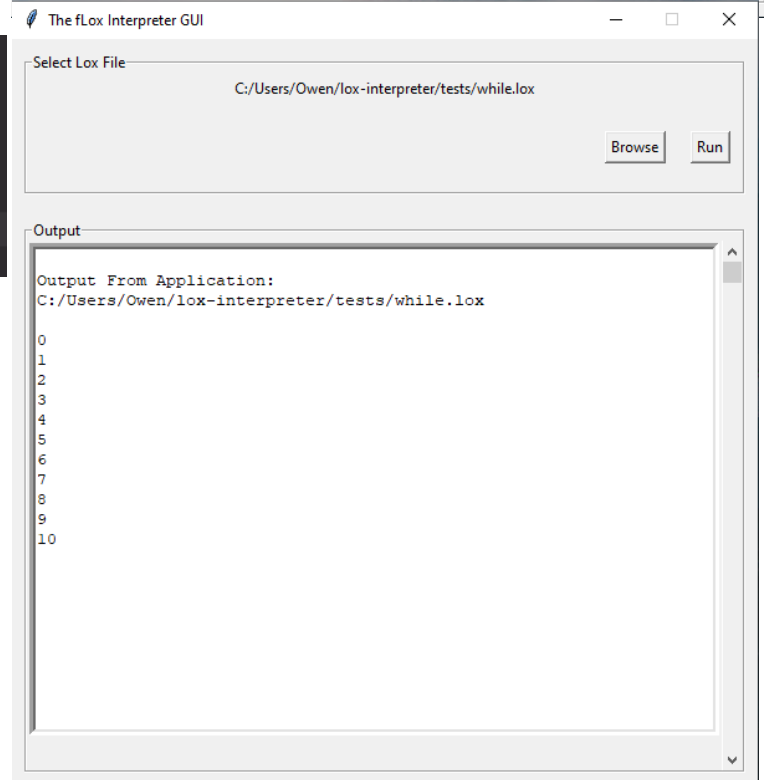

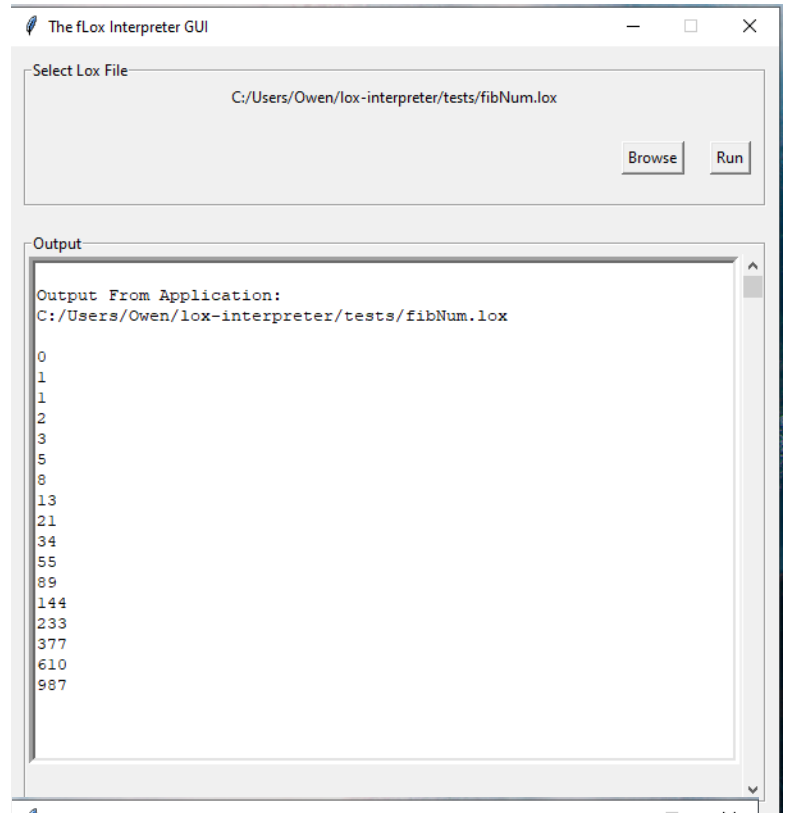

For Loop + While Loop Testing:

Code:

```
tests > fibNum.lox
1  var A = 0;
2  var temp;
3
4  for(var B = 1; A < 1000; B = temp+B){
5      print A;
6      temp = A;
7      A = B;
8  }
```

```
tests > while.lox
1  var i = 0;
2  while(i <= 10){
3      print i;
4      i = i + 1;
5  }
```

Output:

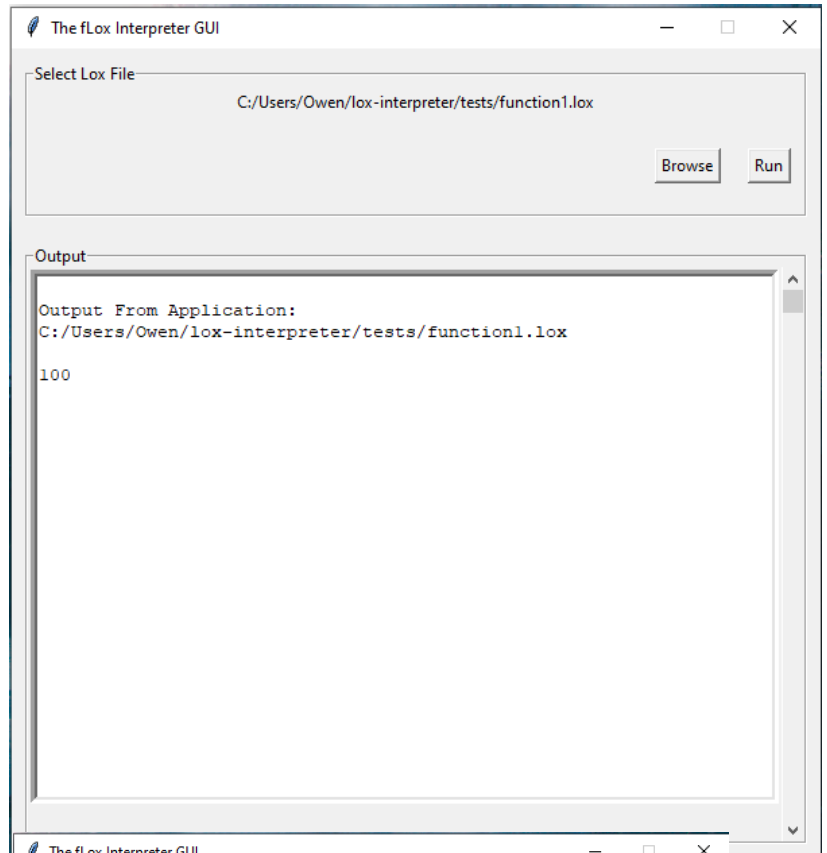

Function Testing:

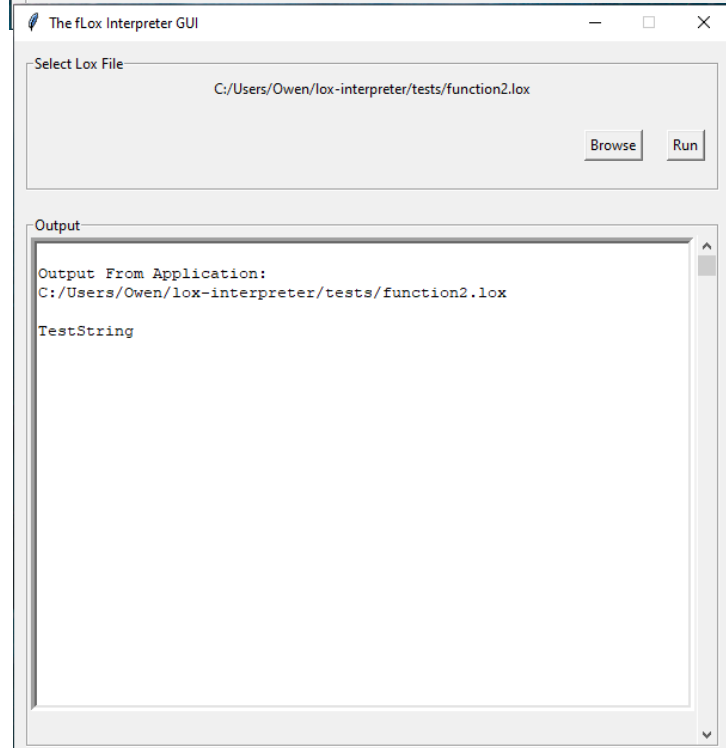

Code:

```
tests > function1.lox
1  fun functionTest(integer1, integer2){
2      var answer = integer1 * integer2;
3      print answer;
4  }
5
6  functionTest(10,10);
```

Output:

```
tests > function2.lox
1  fun functionTest2(string1, string2){
2      var concat = string1 + string2;
3      print concat;
4  }
5
6  functionTest2("Test", "String");
7  |
```

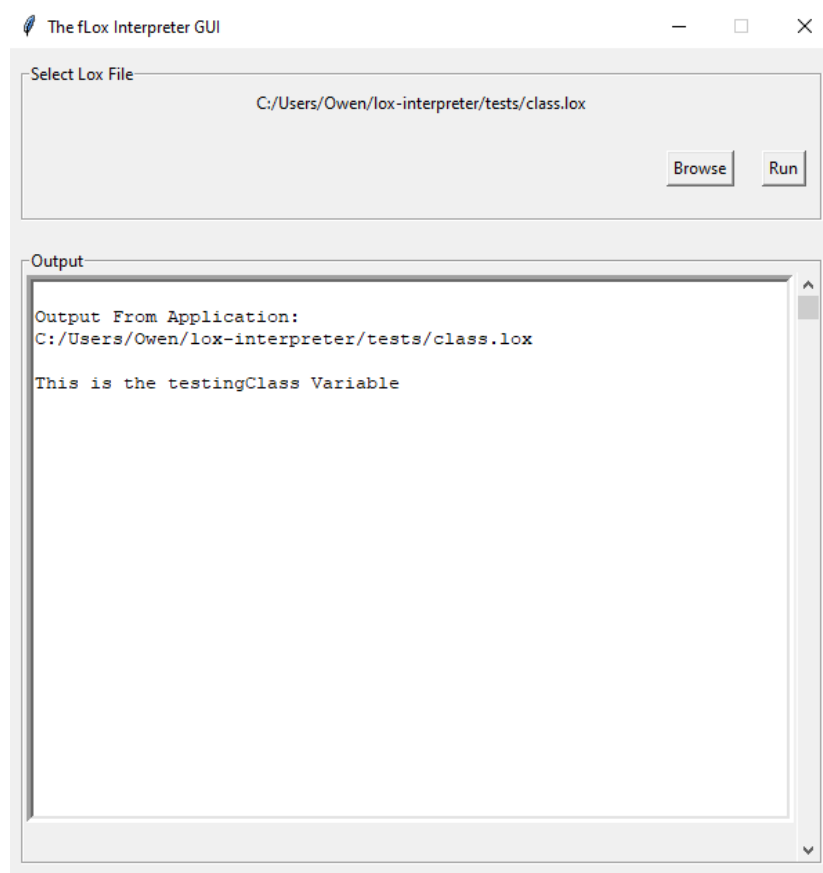

Class Testing:

Code: [file = class.lox in tests folder]

```
//Testing of basic class Initialization
class testingClasses{
    init(){
        var testVar = "This is the testingClass Variable";
        print testVar;
    }
}

testingClasses();
```

Output:

Class Testing:

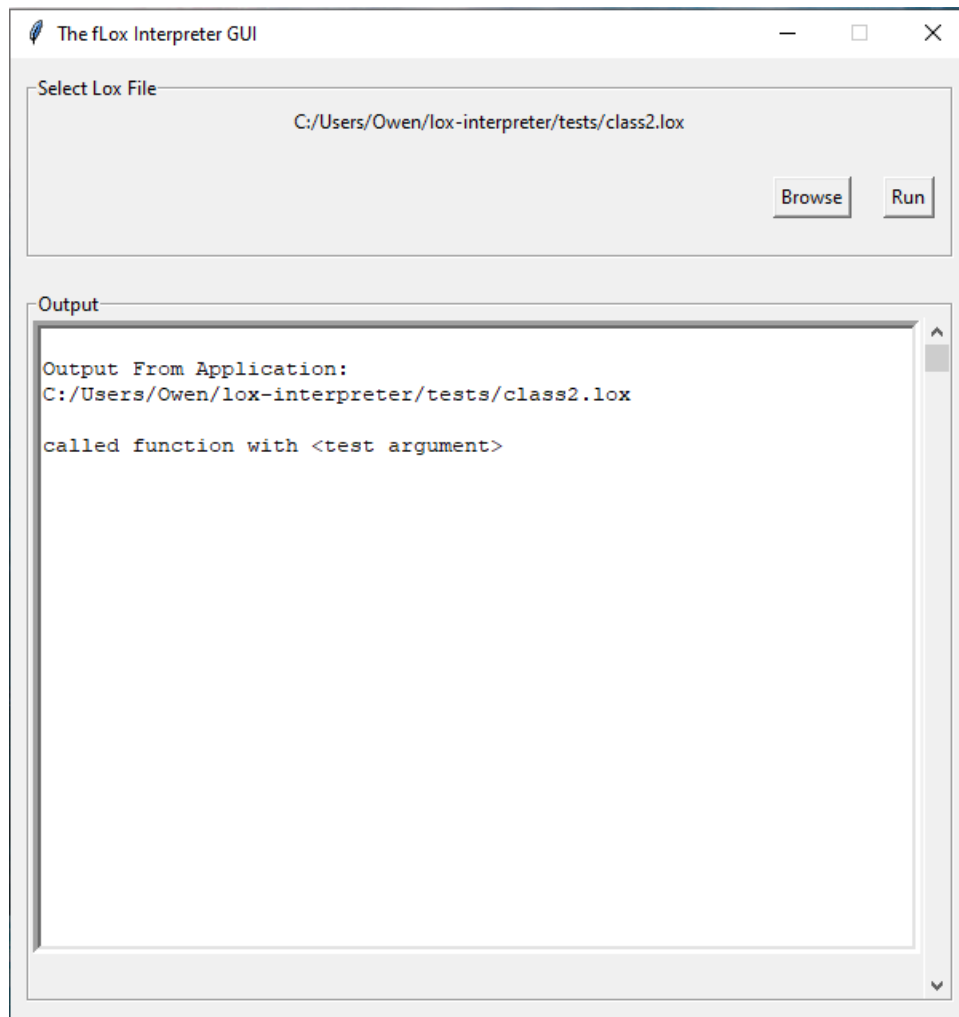

Code: [file = class2.lox in tests folder]

```
class Box {}

fun notMethod(argument) {
  print "called function with " + argument;
}

var box = Box();
box.function = notMethod;
box.function("<test argument>");
```

Output:

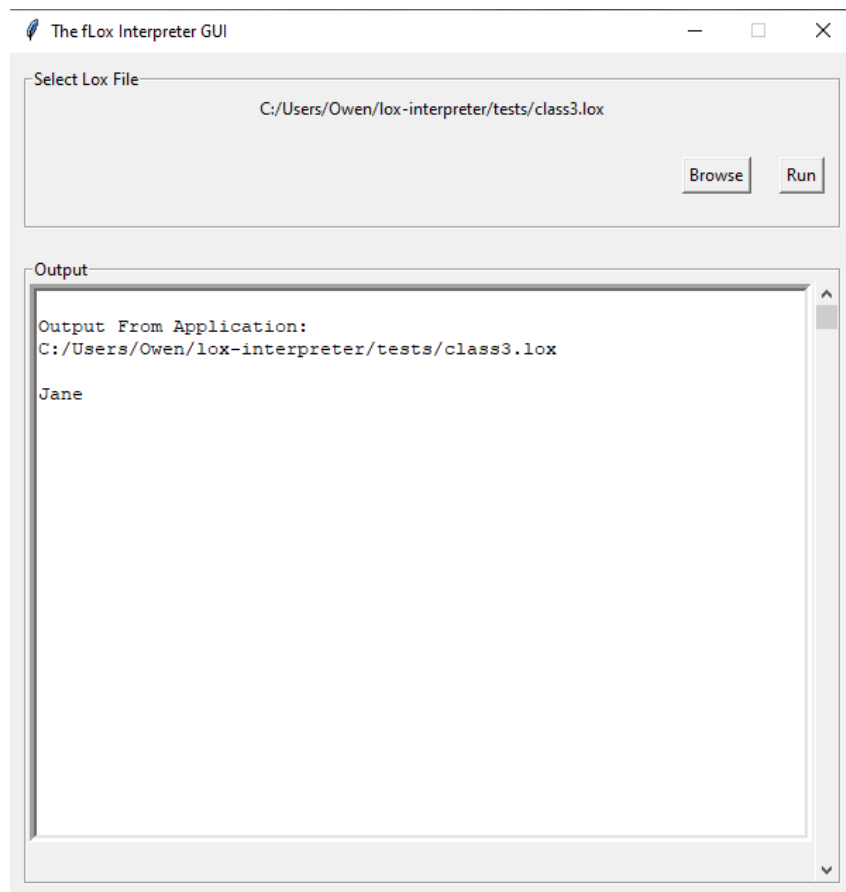

Class Testing:

Code: [file = class3.lox in tests folder]

```
class Person {  
    sayName() {  
        print this.name;  
    }  
}  
  
var jane = Person();  
jane.name = "Jane";  
  
var bill = Person();  
bill.name = "Bill";  
  
bill.sayName = jane.sayName;  
bill.sayName(); // Should print Jane
```

Output:

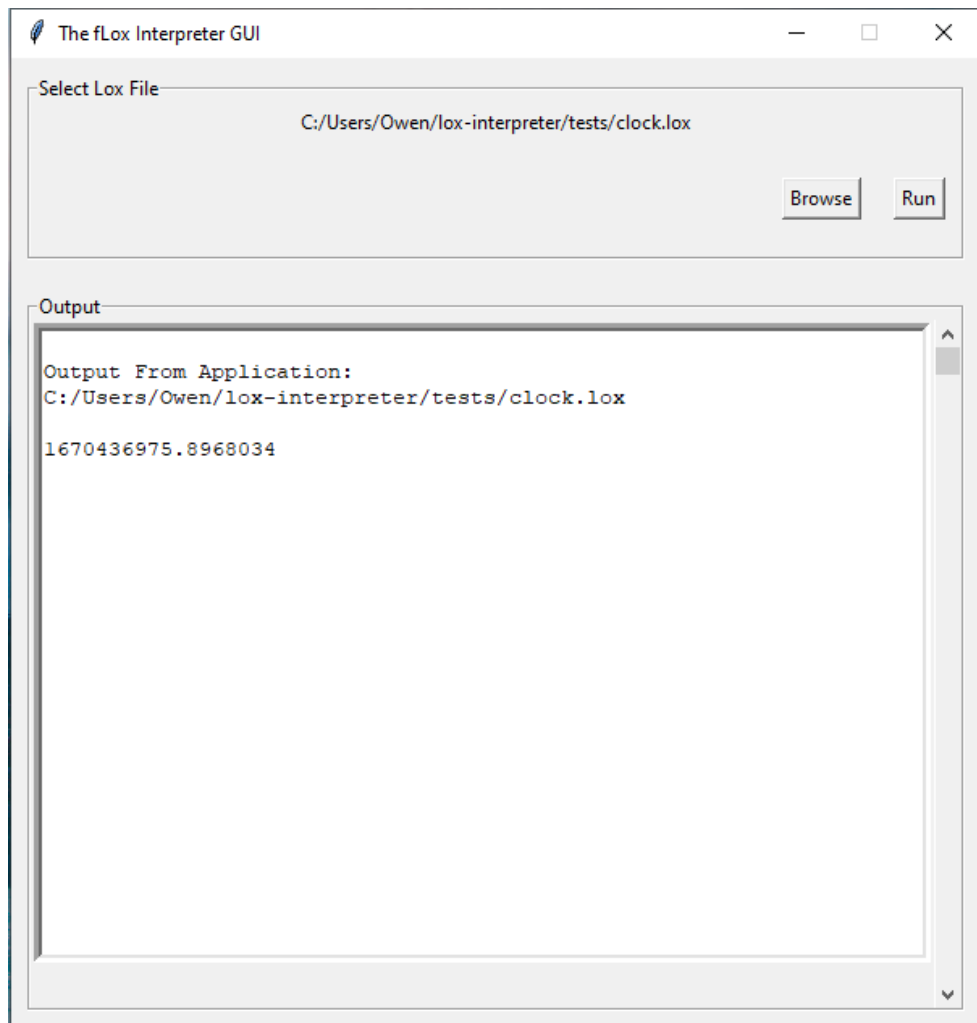

Clock() Test:

Code: [file = clock.lox in tests folder]

```
//Testing of the one built in standard library function of Lox  
print clock();
```

Output:

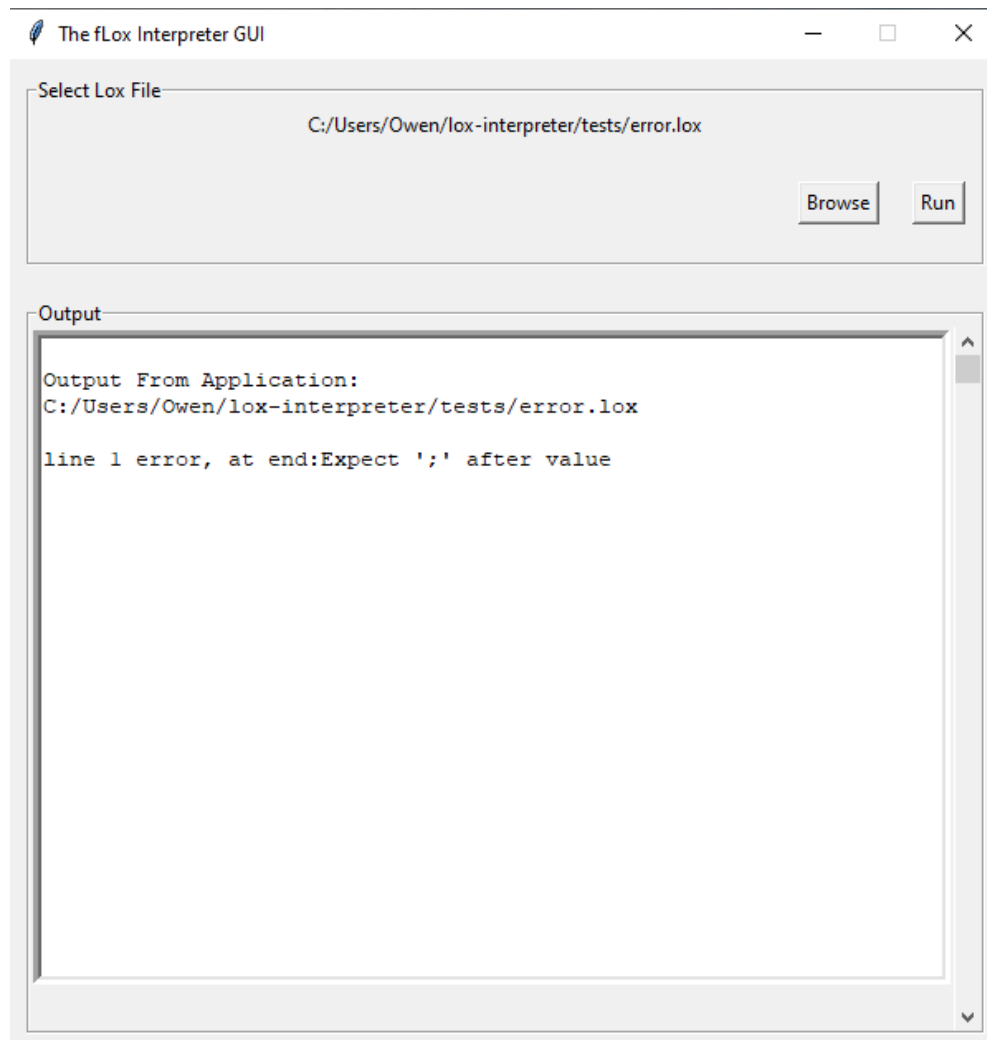

Syntax Error Test:

Code: [file = error.lox in tests folder]

```
print "This breaks"
```

Output:

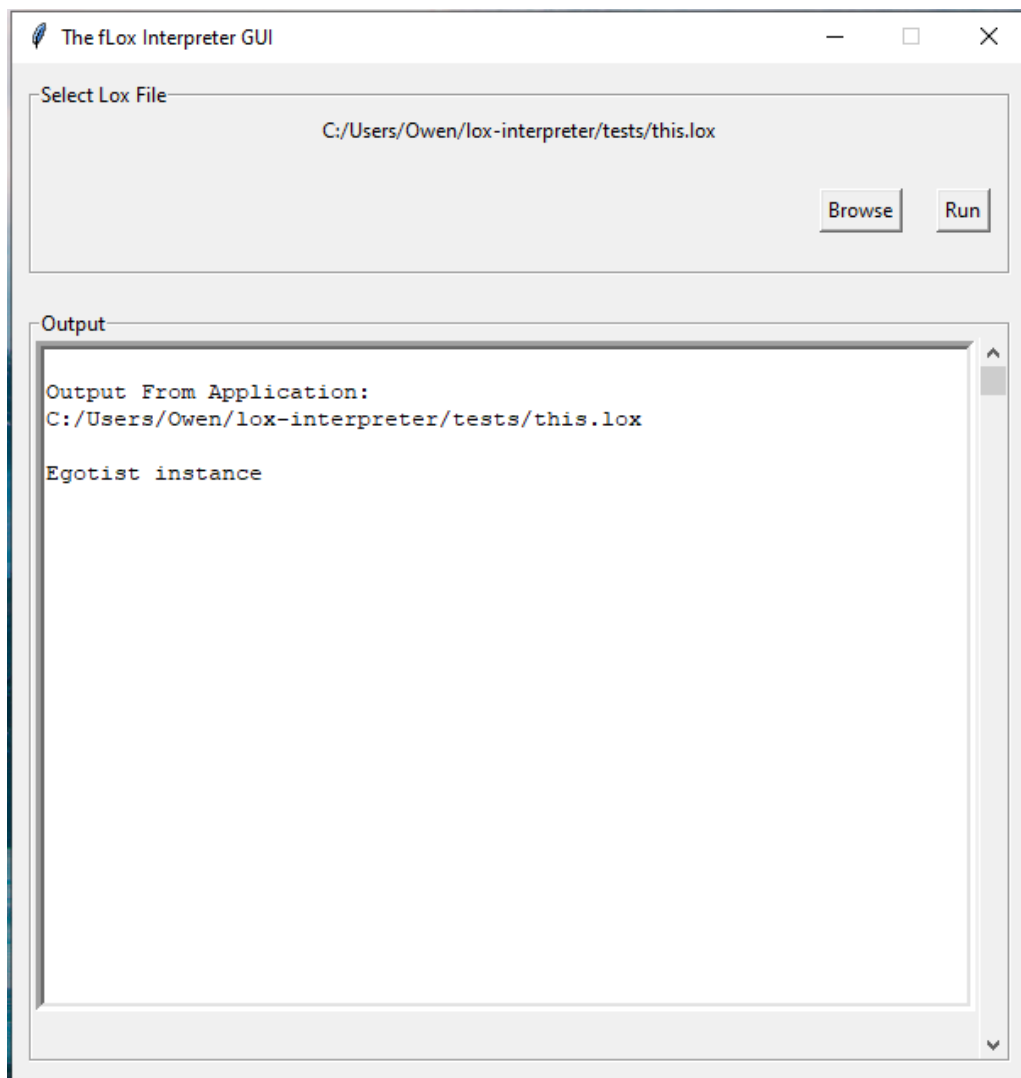

Class [this] Testing:

Code: [file = this.lox in tests folder]

```
class Egotist {  
    speak() {  
        print this;  
    }  
}  
  
var method = Egotist().speak;  
method();
```

Output:

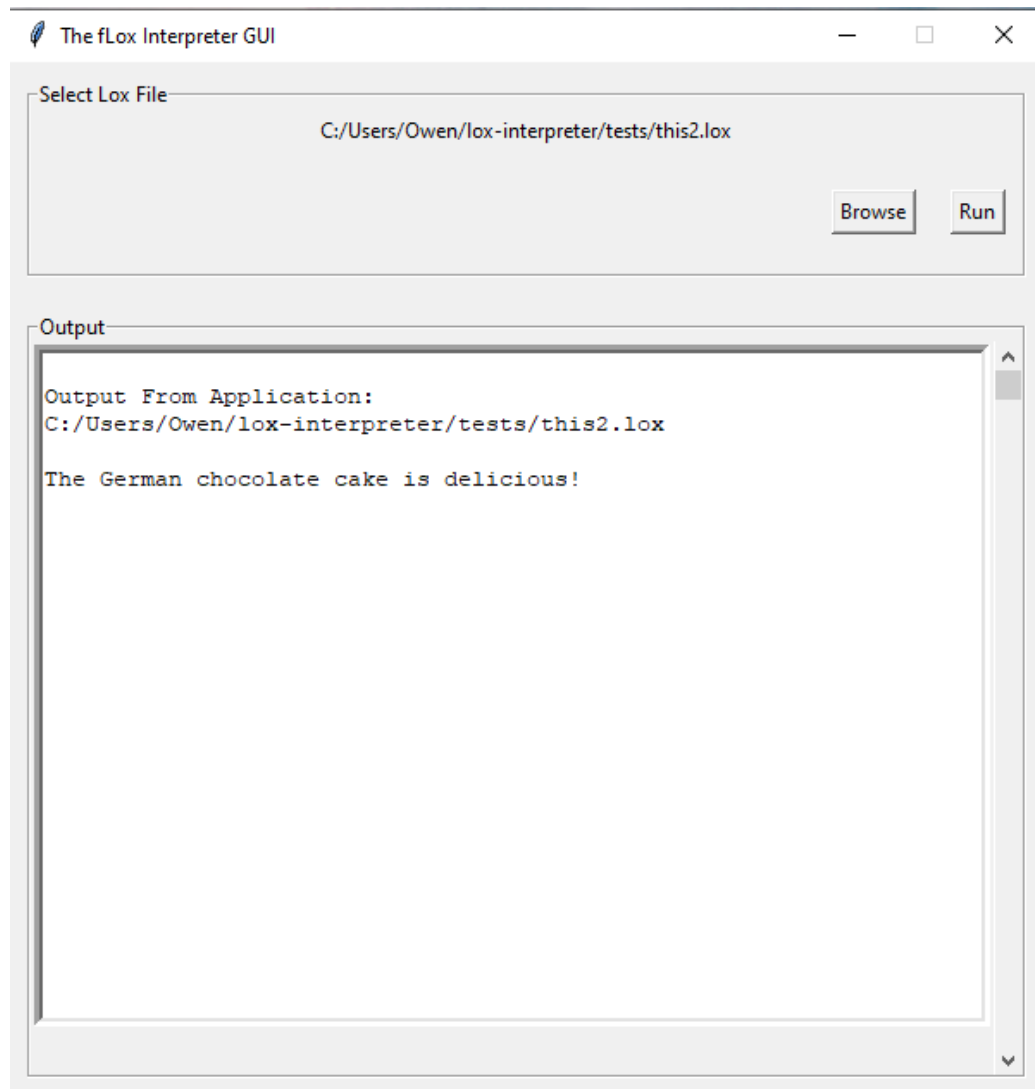

Class [this] Testing:

Code: [file = this2.lox in tests folder]

```
class Cake {  
    taste() {  
        var adjective = "delicious";  
        print "The " + this.flavor + " cake is " + adjective + "!";  
    }  
}  
  
var cake = Cake();  
cake.flavor = "German chocolate";  
cake.taste(); // Prints "The German chocolate cake is delicious!".
```

Output:

Inheritance Test:

Code:

[file = inheritance.lox in tests folder]

```
class Doughnut {
  cook() {
    print "Fry until golden brown.";
  }
  serve(){
    print "Place in a nice doughnut box!";
  }
}

class BostonCream < Doughnut {
  cook() {
    super.cook();
    print "Pipe full of custard and coat with chocolate.";
    super.serve();
  }
}

BostonCream().cook();
```

Output:
